IA03: Use-Case-to-Story Traceability Card

Identity: jpkanquandah, team Intellectuals, LiftPro Crane Services Website, client domain: mobile crane hire in Madina, date 23 October 2026.

Source and use-case card

Field	Entry
Use case	UC-02: Customer enquires about a crane service
Source	Client intake call of 3 October 2026 (team charter D0 section C.4): the client wants a button that sends visitors to his WhatsApp. Use case UC-02 in our team requirements documents.
Why it matters	Enquiries are the whole reason the website exists. It removes the repeated DM questions for the client.
Actor	Customer (website visitor on a phone)
Goal	Ask the owner about a specific crane service
Trigger	The customer taps Enquire on a service
Preconditions	The site is online; the customer has WhatsApp or can open the WhatsApp web link; the owner’s number is approved and set
Main success flow	1. Customer opens the website. 2. Customer views the Services section. 3. Customer selects a service and taps Enquire. 4. WhatsApp opens with the owner’s number and a prepared message naming the service. 5. Customer edits the message if needed. 6. Customer sends the enquiry.
Alternate flow	The customer is not sure which service they need: they tap “Not sure? Ask the owner” and a general message opens (flow 2 in our demo).
Exception or failure flow	WhatsApp is not installed or the link cannot open: the phone shows the WhatsApp page or an error, the customer can use the number shown in the Contact section instead.
Postconditions	A chat with the prepared message is open in WhatsApp. The website has stored nothing.

Story, acceptance criteria and NFR

Story: As a customer, I want to tap Enquire on a crane service, so that I can ask the owner about it in WhatsApp without typing the details myself.

AC1 (success), Given-When-Then: Given I am on the Services section on my phone, when I tap Enquire on a service, then WhatsApp opens with the owner's approved number and a message that includes that service's name.

AC2 (error path): Given WhatsApp cannot open from the link, when I tap Enquire, then I can still find the owner's number and location in the Contact section and contact him another way.

NFR category: Reliability and correctness of the contact number. **NFR:** Every WhatsApp link on the site shall use the approved number. **Why it matters:** if the number is wrong, the client loses customers and customers reach a stranger. **What "secure" means here:** only the approved number is ever used, only the team can change it through a reviewed pull request, and the site stores no customer data. **What "fast" means here:** the page and Enquire buttons are usable within about 3 seconds on mobile data.

Traceability row

Source	Use case	Story	NFR	Issue	AC	Test idea	Status
Client intake: WhatsApp button	UC-02	Enquire about a service	NFR-12	right number UC-02: Customer enquires about a crane service (WhatsApp Enquire button). URL: (link in the Sakai portfolio) AC1, AC2 Test name: TC-06 link	user the a	pproved number. Input: service "Mobile Crane Hire (sample)". Expected: link starts with the approved number and the message contains the service name. Planned (test not yet run by me)	

Request-flow reasoning

Question	Answer
Actor device and interface	Customer's phone, mobile browser

Question	Answer
Screen, route or endpoint	Services section of https://crane-mobile.vercel.app/, then a wa.me link
Data sent	Only a page request; the link carries the number and message text
Validation	The message is URL-encoded; the number comes from one config place
Database or service	None; WhatsApp is the external service
Response	Static page; WhatsApp chat with prepared message
Validation failure	Missing service name or bad number is caught by tests and review
Outage	Hosting or WhatsApp down: page or chat cannot open
Failure point	The link content (wrong number or broken encoding)
Protected data or concern	The approved number, and customer privacy (nothing stored)

Declaration and AI disclosure

“I understand the use case, story, acceptance criteria and traceability links submitted here, and I can explain them orally if called upon.” Typed name: jpkanquandah

AI used: Yes. Claude (Anthropic), 23 October 2026: drafted the card layout from my team’s use cases. I changed the wording to match our site, and checked the use case, story and flow against our team documents. No IA03 video is required.
